

Bhavika Sadhwani

Frontend Engineer | React.js · TypeScript · Real-time Systems

+91-8305917655 • bhavikasadhwani4@gmail.com • LinkedIn • GitHub

Frontend Engineer with 3 years at Jio Platforms building real-time React systems for 5M+ users. Specializes in performance engineering, WebSockets, and scalable component architecture. Delivered high-impact production features across JioMeet Plus.

TECHNICAL SKILLS

Frontend	React.js, Next.js, AngularJS, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Redux, Zustand, React Context API
Frontend Engineering	Component Architecture, Performance Optimization, Code Splitting, Lazy Loading, Tree Shaking, Bundle Optimization, Responsive Design, Cross-Browser Compatibility, Accessibility, Core Web Vitals
State & APIs	REST APIs, WebSockets, Socket.IO, JWT Authentication
Real-Time	WebRTC, Real-Time Communication
Testing	Jest, Unit Testing, Playwright, Storybook
Build & DevOps	Webpack, npm, Package Publishing, Git, GitHub, Docker, CI/CD, Azure DevOps, Agile / Scrum

PROFESSIONAL EXPERIENCE

Jio Platforms Limited

Frontend Engineer

Mumbai, India

Oct 2023 – Present

- Designed and owned the core real-time communication system for **JioMeet Plus (25M+ users)** using Socket.IO, enabling low-latency chat, messaging, and user-status management at production scale.
- Engineered a high-performance chat and contacts experience layer with client-side caching, memoization, and optimized API handling, reducing redundant network calls and improving UI response time by **25%**.
- Implemented virtualized rendering architecture for chat, contacts, and activity feeds, enabling smooth rendering of **10k+ items** and reducing DOM overhead while improving scroll performance and interaction stability.
- Engineered a universal file preview system supporting images, PDFs, documents, audio, and video with per-media optimized rendering strategies, reducing load time for heavy media assets by **30%**.
- Implemented rich-text messaging capabilities using **ReactQuill**, supporting text formatting, structured message composition, and consistent rendering of formatted content across the chat experience.
- Developed an intelligent **link preview** experience that detects URLs in messages and renders contextual previews, improving content discoverability and the overall chat experience.
- Spearheaded the development of a comprehensive meeting recap card that integrated AI-generated summaries and live transcriptions, enhancing information accessibility and reducing follow-up inquiries by **40%**.
- Improved search performance across chat and contacts using debounced input handling, query optimization, and request deduplication, reducing unnecessary API calls by **40%** and improving responsiveness.

KEY PROJECTS

Job Tracker | React.js, TypeScript, Tailwind CSS

- Built a responsive job-tracking application to manage applications, hiring stages, and job-search workflows.
- Implemented reusable components, search, status-based filtering, and application-stage management using TypeScript.

Offline-First Task Manager | React.js, TypeScript, Zustand, IndexedDB, Tailwind CSS

- Developed an offline-first task management application with CRUD operations, filtering, infinite scrolling, and persistent browser storage.
- Used Zustand for predictable state management and IndexedDB for reliable offline data persistence.

EDUCATION

Gyan Ganga Institute of Technology and Sciences

B.Tech in Computer Science

2019 – 2023

CGPA: 9.13 / 10

LEADERSHIP & RECOGNITION

- Awarded **Spot Award and A+ Performance Rating** at Jio Platforms for high-impact delivery on JioMeet Plus serving 25M+ users.
- Led internal sessions on React architecture, state management, and AI-assisted frontend workflows.
- Solved **450+ problems** on LeetCode and GeeksforGeeks.
